ACKNOWLEDGEMENT

This project is being the first one undertaken by us was an unforgettable and educative experience. We take this opportunity to thank all those who have generously helped us to give a proper shape to our work.

Our Sincerest appreciation must be extended to ddit, nadiad. We also want to thanks faculties of our college, they have been very kind & helpful to us.

We are thankful to Prof. S.K.VITHLANI who had given a nice guidance & support to us to fulfil and complete the project within duration.

Finally, I would like to thank my head of the department Prof. V.K.DABHI for his constant guidance,encouragement and moral support.

Yours Sincerely

UDEET PATEL

1. SYSTEM OVERVIEW

1.1 CURRENT SYSTEM

CAR MANUFACTURING COMPANY Database System have tables called CUSTOMER , ADDRESS , PHONE NO. , PAYMENT , OPTION , CAR , MODEL , SHOWROOM , PAYMENT , MANUFACTURER , COMPANY. Using these tables we can find any information.

If we want to implement then we can implement that using this system and achieve desired functionalities. Functionalities can be related to any of person who needs the information related to any product. The tables used in system probably have all the useful attribute in it through which information can be generated. And also it contains many Procedures to Manage Database. All updates done on Data Items is reflected on Database using trigger.

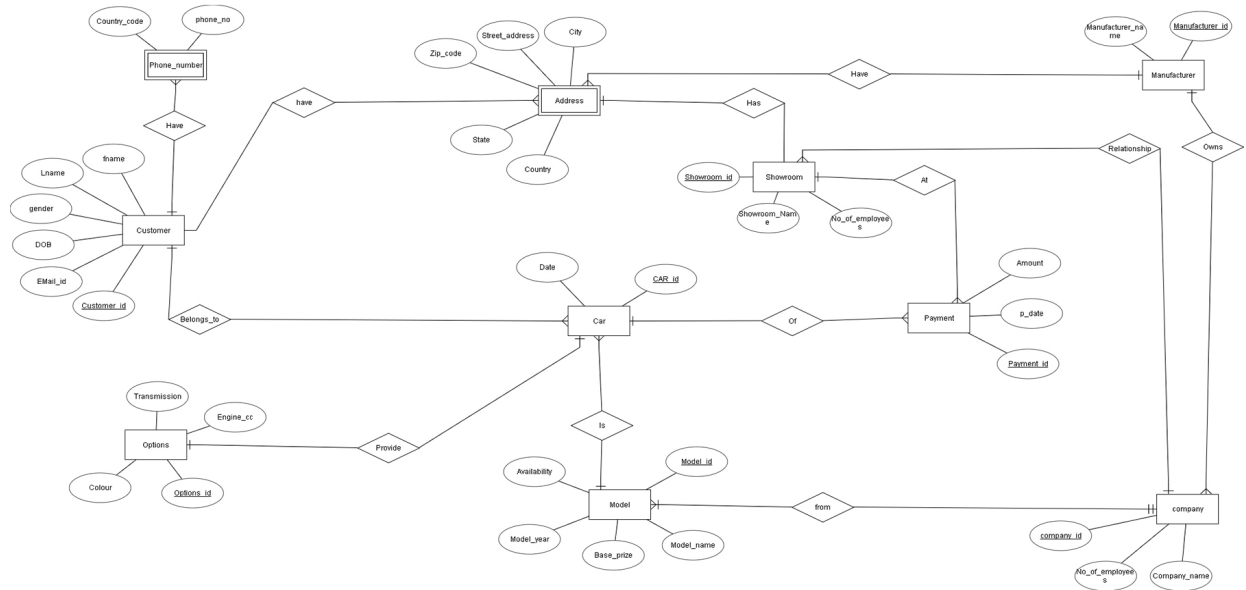

1.2 OBJECTIVES OF THE PROPOSED SYSTEM

1. Customer can make a payment .
2. Record all customer details who buy car from any showroom of the company .
3. Company provides many models for his customer and also all models have different options .
4. For installment of payment showroom have details of customer's payment at every month and also total payment made by customer.

1.3 ADVANTAGES OF THE PROPOSED SYSTEM (OVER CURRENT)

- Customer can get all the details of car-company , car model , car manufacturer.
- Customer also can get details about at which rate car is available.
- Customer can buy car.
- All table details can be easily managed and supervised.
- Customer can have option for choosing different car model of different company.
- Car model have different option as per customer's requirement.
- This database will automatically add age in age(at the time of inserting) column by subtracting current year with the year of birth.
- In this database user will enter the id of car and the procedure will count the total amount he or she already has paid and how much is remaining.
- In this database user need to enter the data in car table(means user is going to buy a car) but if in car model table availability's status is "not available" for the car model chosen by user he or she can not add this(buy the car with that car model).
- In this database user will enter the name of company and the procedure will count Net income of that company by calculating the base price of car sold by that company.

5.4 PL/SQL Blocks (Procedures and Functions)

1. PROCEDURES

1. If user wanna add new model in car model table.

```
CREATE DEFINER='root'@'localhost' PROCEDURE `add_car_model`(in name
varchar(15),in model_id varchar(5),in availability varchar(15),in price double,in
car_company varchar(15))
```

```
BEGIN
```

```
declare cid varchar(5);
```

```
select comapny_id into cid from car_company where company_name=car_company;
```

```
insert into
```

```
car_model(model_year,model_id,model_name,availability,base_price,fk_company_id
_model) values (year(curdate()),model_id,name,availability,price,cid);
```

```
END
```

Model_Year	model_id	model_name	availability	Base_price	fk_company_id_model

2. In this procedure user need to enter the data in car table(means user is going to by a car) but if in car model table availability's status is "not available" for the car model chose by user he or she can not add this(buy the car with that car model)..

```
CREATE DEFINER='root'@'localhost' PROCEDURE `CAR3`(IN CARid

5.5 TRIGGERS

1. It will automatically add age in age(at the time of inserting) column by subtracting current year with the year of birth.

```
➔ CREATE DEFINER='root'@'localhost' TRIGGER `t1` BEFORE INSERT ON
`customer` FOR EACH ROW BEGIN
    set new.Age = TIMESTAMPDIFF(YEAR,dob,CURDATE());
END
```

END
```

5.7 CURSORS

1. in this procedure(cursor) user will enter the id of car and the procedure will count the total amount he or she already has paid and how much is remaining...

```
CREATE DEFINER='root'@'localhost' PROCEDURE `cur2demo`(car_id

6. FUTURE ENHANCEMENTS OF THE SYSTEM

- We May Further Upgrade The System Made web Application In Form Of Graphical User Interface(Gui) Based web App.
- It May Also Upgradeable To make a application for this.
- We Further Update Into Existing One Into Efficient Application,
- If Some Bugs Occur In The System & Hence To Make It Reliable.

7. BIBLIOGRAPHY

For The Successful Working Of Our Project We Have Referred Many Sources For. The Code Snippets, Logics Tips & Tips From The Various Books As Well As Websites. Most I Searched For Requirement Possession On The Books . Many Of The Logics In My Project Are Used From The Book Which We Referred & The Concepts There In Book Which Indeed Provided A Platform To Achieve Such Reliable System Database.
